

Axle machine shop of RWF is using a coolant in axle machining lathes. Presently each machine has the individual coolant tanks and pumps. It is proposed to make centralized coolant processing unit to cater all the machines. Firm's who are in the filed of manufacturing such centralized system may contact the following address/visit RWF to study and give the proposal.

Present total capacity of coolant used is 72 m³/h

Expected to increase upto 216 m³/h
